Project Title

Online Complaint Management System

Short Description

The Online Complaint Management System is a web-based system that enables users to submit, manage and track complaints online. The types of users the system is going to have include Student (User1), Staff (User2) and Admin (User3). Students can make a complaint and check on its status. Staff can view complaints assigned to them, update complaint status, and respond to complaints. An admin can manage the users, see all complaints, and distribute the complaints to staff. The project will be developed using HTML, CSS, JavaScript, AJAX, PHP, and MySQL.

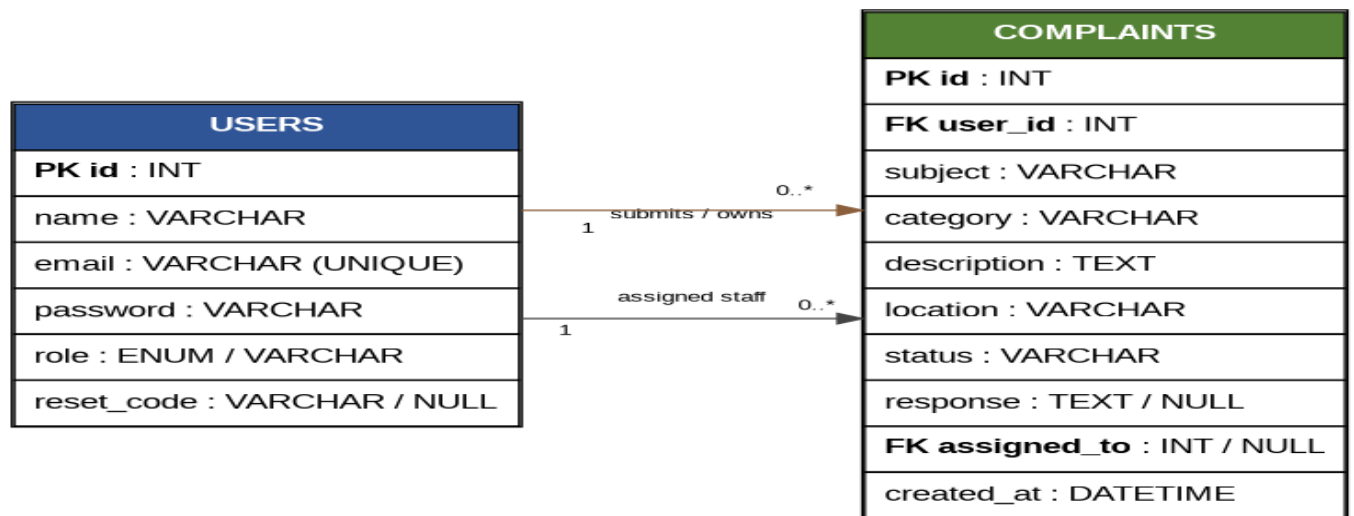

Introduction

The Online Complaint Management System is a hassle-free and systematic system to manage the complaints. Users can submit their complaints using an online method instead of manually submitting them. Once a complaint is submitted, it can be browsed and allocated to a staff member who will handle the issue. Staff can change the complaint status and response. Admin can track and control entire complaint process. It also offers users authentication, profile management, individual dashboards, and complaint tracking.

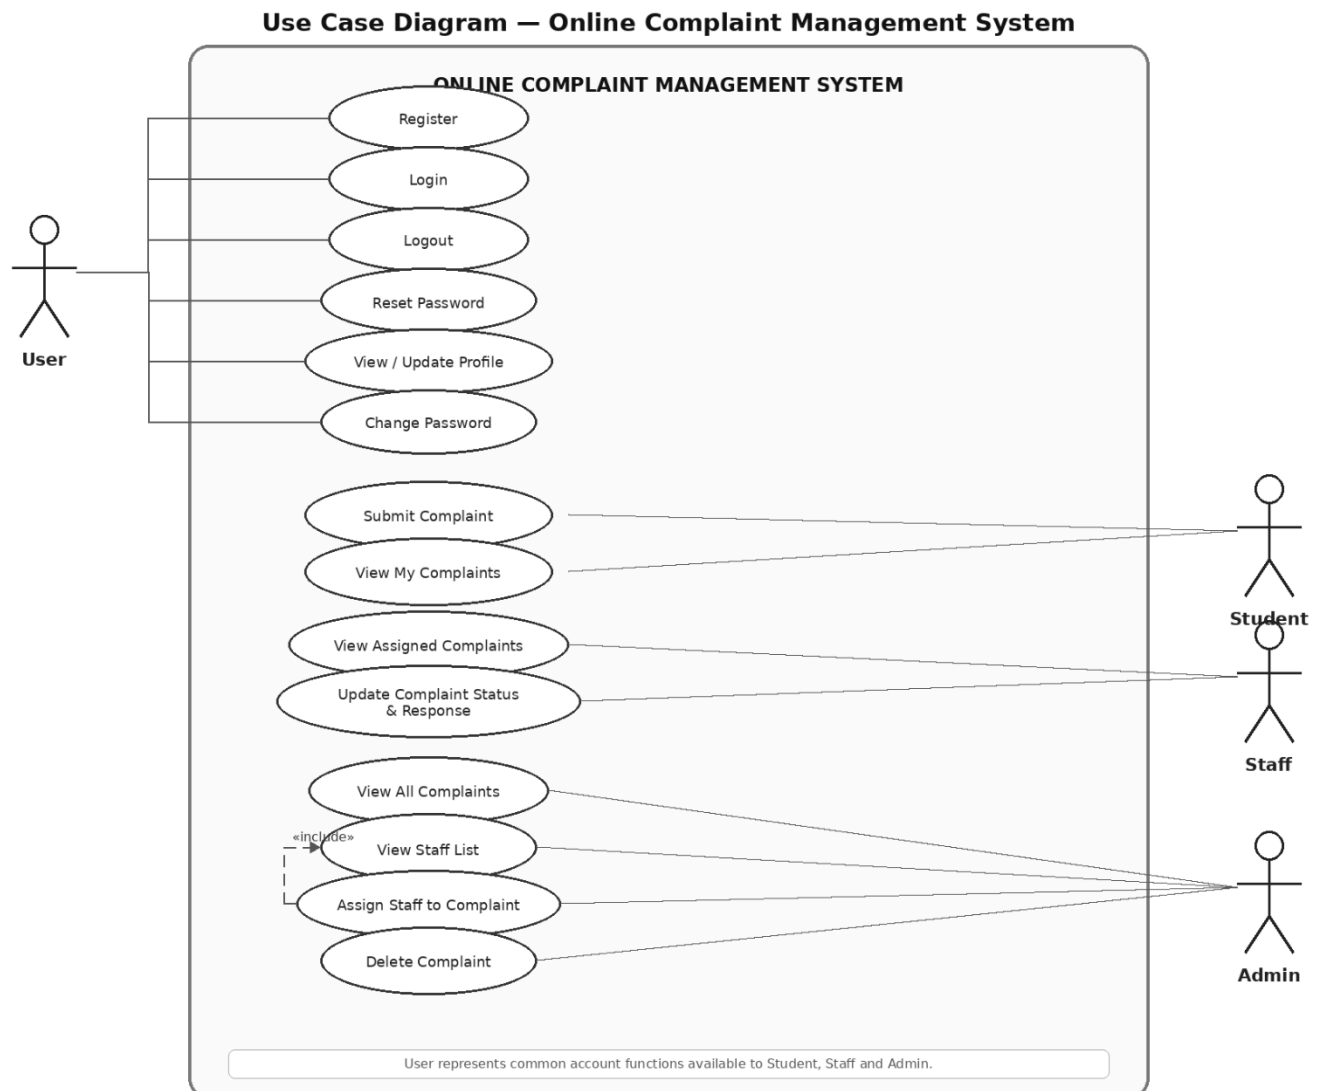

Background Study

Traditional complaint management processes may facilitate complaints being registered manually or through a variety of communication channels. But this can make it a little challenging when holding records, targeting complaints on responsible people and tracking them to closure. A web-based complaint management system can help overcome these challenges by creating a central database of all the information related to complaints. Users can raise complaints online and authorized employees are able to process them quickly. Then this project will let you build a simple digital complaint management system using HTML, CSS, JavaScript, AJAX, PHP & MySQL. AJAX: The AJAX system will be used to communicate with a server without the page being fully reloaded, therefore this would allow the systems to load/manage the profile of a user and complain.

Types of Users:1.Student 2.Staff 3.Admin

Common Features(Available to All Users)

- **Authentication**
 1. Login to the system
 2. Logout from the system
 3. User registration
- **Account Management**
 1. Change or reset password
 2. Manage profile information (view, edit, delete)
- **Dashboard**
 1. Access a personalized dashboard after login

Specific Features by User Type

- **Features of User1**
 1. **Submit complaints** about subject, category, location, and description.
 2. **View and track submitted complaints** from the personal dashboard.
 3. **View complaint status and responses** from Staff/Admin.
- **Features of User2**
 1. **View assigned complaints** from the Staff dashboard.
 2. **Update complaint status** such as pending, in progress, or resolved.
 3. **Add a response** to assigned complaints.
- **Features of User3**
 1. **View all complaints** submitted in the system.
 2. **Assign complaints to Staff** members.
 3. **Manage users** and monitor the complaint management process.
